## Abstract of DE3347028

superfluous additional ventilators. provided makes possible an economical forced and/or window frame as a heat problems, with heat recovery and renders ventilation, which can be retrofitted without opening (4). The cold fresh air is guided in a is blown into the open through an outlet after passing through the outgoing-air duct (9) part good heat-conducting intermediate wall exchanger/ventilator. To this end, the hollow to design the hollow frame (1) of outer frame With the invention it is proposed, in a window, into the interior of the room. The window flows so that only prewarmed fresh air passes exchange takes place between the two air through the fresh-air duct (10). A heat corresponding manner in countercurrent duct (10). The warm outgoing air is drawn in (8) into an outgoing-air duct (9) and a fresh-air frame (1) is divided by means of a for the most hrough an inlet opening (3) by a fan (13) and
